RE: Application No. 10/603,908

**REVISED CLAIMS**

1. An infant sleep support device designed to position an infant on their back comprising:  
  
An adjustable strap member; and  
  
A plurality of movement restrictors releasable securable to said adjustable strap member.
2. The infant sleep support of claim 1 wherein said plurality of movement restrictors is releasable securable to said adjustable strap member by hook and loop fasteners.
3. The infant sleep support device of claim 1 wherein said plurality of movement restrictors is releasable securable to said adjustable strap member

by snaps.

4. The infant support device of claim 1 wherein said plurality of movement restrictors is inflatable.

5. An infant sleep support device designed to position an infant on their back comprising:

A clothing article;

A first attachment member positioned on said clothing article;

A second attachment member positioned on said clothing article opposite said first attachment member;

A first movement restrictor having a third attachment member for releasable engaging said first attachment member;

And

A second movement restrictor having a fourth attachment member for releasable engaging said second attachment member.

6. The infant sleep support device of claim 5 wherein said third attachment member is releasable engaged to said first attachment member by a hook and loop fastener.

7. The infant sleep support device of claim 5 wherein said third attachment member is releasable engage to said first attachment by a snap.

8. The infant sleep support device of claim 5 wherein said forth attachment member

is releasable engaged to said first attachment by a hook and loop fastener.

9. The infant sleep support device of claim 5 wherein said forth attachment is releasable engaged to said first attachment member by a snap.

10. The infant support device of claim 5 wherein said first movement restrictor is inflatable.

11. The infant support device of claim 5 wherein said second movement restrictor is inflatable.

12. A method for forming an infant sleep support to position infant on their back, said method including the steps of:

Attaching a first attachment member to a clothing article;

Attaching a second attachment member to the clothing article opposite the first attachment; and

Providing at least one movement restrictor having a third attachment member for releasable engaging the first or second attachment member.
